INTRODUCTION

The family Dermestidae (Coleoptera) contains about 1300 species and subspecies worldwide [Háva, 2003, 2010]. The Palaearctic fauna, including species occurring in Ukraine and Russia, is summarized in the Palaearctic Catalogue [Háva, 2007]. Special reference about the distribution in Ukraine and Russia is supplied by [Voroncov, 1914, Zhantiev, 1976, Kotenko, 1987, Lafer, 1992, Kozminykh, 1997, Pushkin, 2000, Dedyukhin et al., 2005, Mateleshko, 2009, Kalík & Háva, 2008 and Háva & Legalov, 2010].

The present paper summarizes 17 species belonging to the family Dermestidae with new faunistics records from the concerning region.
