INTRODUCTION

No special research on the Pterophoridae of Zimbabwe has been done hitherto. Five species of Pterophoridae were reported for Zimbabwe in the catalogue of the world fauna [Gielis, 2003], and three more species were added recently [Ustjuzhanin, Kovtunovich, 2010; Kovtunovich & Ustjuzhanin 2012] new species.

From 2010 to 2012 three field trips were done to Zimbabwe by the members of Russian expedition to South Africa with the aim to investigate the Pterophoridae fauna. As a result, they collected a significant material which is in general presented in this article. In addition to our own collections, we used the materials of DNMNH (Ditsong National Museum of Natural History, Pretoria), British museum (BMNH, London) and the collections of our German colleague, Jurgen Lenz, who lived and worked in Zimbabwe for years.

The list of Zimbabwean Pterophoridae contains at present 56 species. There is no doubt that Pterophori-

dae fauna of Zimbabwe is much richer, with 20-25 species expected. Many areas of the country, mostly at the west, are practically unexplored.
